All Rights Reserved

No part of this publication may be reproduced or transmitted in any form, or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1983 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for regular articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 26

Number 1, July 1983

Brendan J. Gannon, Steven M. Rosenberger, Tamara D. Versluis, and Paul C. Johnson. Autoregulatory Patterns in the Arteriolar Network of Cat Mesentery 1

David O. DeFouw and Francis P. Chinard. Variations in Cellular Attenuation and Vesicle Numerical Densities in Capillary Endothelium and Type I Epithelium of Isolated, Perfused Dog Lungs after Acute Severe Edema Formation 15

W. L. Joyner, G. T. Campbell, C. Peterson, and J. Wagoner. Adrenergic Neurons: Are They Present on Microvessels in Cheek Pouches of Hamsters? 27

Patrick W. Bankston and Anthony J. Milici. A Survey of the Binding of Polycationic Ferritin in Several Fenestrated Capillary Beds: Indication of Heterogeneity in the Luminal Glycocalyx of Fenestral Diaphragms 36

John A. Faulkner, Stefani W. Weiss, and John K. McGeachie. Revascularization of Skeletal Muscle Transplanted into the Hamster Cheek Pouch: Intravital and Light Microscopy 49

Stefani W. Weiss and John A. Faulkner. Revascularization of Skeletal Muscle Transplanted into the Hamster Cheek Pouch: Electron Microscopy 65

Jonathan D. Gitlin and Patricia A. D'Amore. Culture of Retinal Capillary Cells Using Selective Growth Media 74

Leo C. Maxwell, Jeremiah T. Herlihy, and Gregory L. Riedel. Effects of Ascorbic Acid and EDTA on Vascular Concentration-Response to Catecholamines 81

Virginia H. Huxley and Howard Kutchai. Effect of Diffusion Boundary Layers on the Initial Uptake of O_2 by Red Cells. Theory versus Experiment 89

Brief Communications

Aristidis S. Charonis, Photini C. Tsilibary, Randall H. Kramer, and Steven L. Wissig. Localization of Heparan Sulfate Proteoglycan in the Basement Membrane of Continuous Capillaries 108

Joel L. Bert and Kenneth L. Pinder. From Which Compartment in the Interstitium Does Lymph Originate? 116

Richard L. Hoover and Thomas C. Wright, Jr. Chemotaxis of Endothelial Cells to Formyl-methionyl-leucyl-phenylalanine 122

Kim A. Stelson, Perry L. Blackshear, Jr., and Jonathan D. Wirtschafter. On the Tortuosity of the Veins of the Retina 126

Abstracts of Papers Presented at a Meeting of the German Microcirculation Society, November 26 and 27, 1982, at the Technical University, Munich, Federal Republic of Germany 129

Announcement 137

Number 2, September 1983

C. G. Ellis, R. G. A. Safranyos, and A. C. Groom. Television–Computer Method for *in Vivo* Measurement of Capillary Diameter, Based on the Passage of Red Cells 139

R. G. A. Safranyos, C. G. Ellis, K. Tyml, and A. C. Groom. Heterogeneity of Capillary Diameters in Skeletal Muscle of the Frog 151

Gunvantrai Mistry and George I. Drummond. Heart Microvessels: Presence of Adenylate Cyclase Stimulated by Catecholamines, Prostaglandins, and Adenosine 157

Dhananjaya K. Kaul, Ronald L. Nagel, and Silvio Baez. Pressure Effects on the Flow Behavior of Sickle (HbSS) Red Cells in Isolated (*ex-Vivo*) Microvascular System 170

N. G. McHale and J. M. Allen. The Effect of External Ca^{2+} Concentration on the Contractility of Bovine Mesenteric Lymphatics 182

Takahito Hirose, Emiko Aoki, Masayoshi Ishibashi, Mariko Domae, Togo Ikeda, and Kenzo Tanaka. The Effect of Prostacyclin on Increased Hydraulic Conductivity of Pulmonary Exchange Vessels following Microembolization in Dogs 193

Donald E. McMillan, Nyle G. Utterback, Thomas P. Mitchell. Doublet Formation of Diabetic Erythrocytes as a Model of Impaired Membrane Viscous Deformation 205

Th. Wetter, D. Hoffmann, and H. Schmid-Schönbein. Analysis of Network Flow Distribution: Computational Aid to Minimize Experimental Expenditure 221

Karlheinz S. Herrmann. Platelet Aggregation Induced in the Hamster Cheek Pouch by a Photochemical Process with Excited Fluorescein Isothiocyanate-Dextran 238

Brief Communications

M. A. Perry, C. A. Navia, D. N. Granger, J. C. Parker, and A. E. Taylor. Calculation of Equivalent Pore Radii in Dog Hindpaw Capillaries Using Endogenous Lymph and Plasma Proteins 250

W. I. Rosenblum and F. El-Sabban. Insulin Delays Platelet Accumulation in Injured Cerebral Microvessels of Diabetic and Normal Mice 254

Abstracts of Papers Presented at the German-Speaking Society for Microcirculation, Zurich, Switzerland, November 27–28, 1982 258

Number 3, November 1983

R. G. Miles and J. V. Hurley. The Effect of Thrombocytopenia on the Ultrastructure and Reaction to Injury of Vascular Endothelium 273

Dean E. Schraufnagel, Ch. Roussos, Peter T. Macklem, and Nai-San Wang. The Geometry of the Microvascular Bed of the Diaphragm: Comparison to Intercostals and Triceps 291

Lynn J. Groome, Gary T. Kinasewitz, and John N. Diana. Diffusion and Convection across Heteroporous Membranes: A Simple Macroscopic Equation 307

B. R. McAuslan, W. G. Reilly, G. N. Hannan, and G. A. Gole. Angiogenic Factors and Their Assay: Activity of Formyl Methionyl Leucyl Phenylalanine, Adenosine Diphosphate, Heparin, Copper, and Bovine Endothelium Stimulating Factor 323

Brief Communications

Georgina M. Nemecek and Richard H. Chamberlain. Insulin Alters Cyclic Nucleotide Metabolism and Glycogen Synthase Activity in Microvessels from Hamster Adipose Tissue 339

Gianfranco Scandale, Michele Luigi Carbone, and Marco Bosco. Biomacroscopy: A Simplified Technique to Visualize the Conjunctival Vascular Bed 344

J. L. Borders, W. Brown, and H. J. Granger. An Improved Sensor Head for Cross-Correlation Intravital Velocimetry 347

Technical Report

Thay Q. Lee, Geert W. Schmid-Schönbein, and Benjamin W. Zweifach. The Application of an Improved Dual-Slit Photometric Analyzer for Volumetric Flow Rate Measurements in Microvessels 351

Letters to the Editor 362

Abstracts of Papers Presented at the Eighth Meeting of the Japanese Society for Microcirculation, February 5 and 6, 1983, Ishibashi Culture Center, Kurume, Japan 367

Author Index for Volume 26 387

Cumulative Subject Index for Volumes 25–26 389

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for the printer. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the engraving should be linked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Color illustrations are acceptable, but at the author's expense. An excessive number of tables or illustrations may necessitate a charge to the author.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Handbook for Authors*, 1978, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

SIMIONESCU, N., SIMIONESCU, M., AND PALADE, G. E. (1978). Structural basis of permeability in sequential segments of the microvasculature of the diaphragm: I. Bipolar microvascular fields. *Microvasc. Res.* **15,** 1–16.

BELAMARICH, F. A. (1976). Hemostasis in animals other than mammals: The role of cells. *In* "Progress in Hemostasis and Thrombosis" (T. Spaet, ed.), Vol. 3, pp. 191–220. Grune and Stratton, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1980. Unpublished observations and personal communications should be cited in the *text* as such.

Reprints. Authors will receive 50 reprints at no charge. Additional copies may be ordered when galley proof is mailed.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
